

Mid-Atlantic Broadband Delivers Multi-Terabit Capacity Across Live Network in Southern Virginia

South Boston, VA., - April 9, 2014 - Mid-Atlantic Broadband Communities Corporation (MBC), a successful wholesale fiber-optic open-access network transport provider, completed a trial last week delivering multi-terabit capacity on its existing network across southern Virginia.

The trial demonstrated MBC's ability to deliver multi-terabit capacity providing more bandwidth for data center operators, cloud providers, research and technology companies looking to expand into southern Virginia. The demonstration was conducted with Infinera's DTN-X packet optical transport networking platform, featuring 500 Gigabit per second (Gb/s) super-channels. This trial proved MBC's network's ability to easily transition to supporting next generation terabit transport capability based on its existing Infinera DTN network.

"This trial underscores MBC's ability to rapidly deliver terabit capacity on our existing network," said Tad Deriso, President & CEO of MBC. "As we look toward expanding and enhancing MBC's network infrastructure to accommodate 100Gb/s transport circuits throughout the region, this successful trial is validation that MBC will be able to continually deliver high capacity, scalable bandwidth to our carrier customers."

MBC recently launched GoSOVA, an economic development initiative designed to attract growing, global companies to expand and locate in Southern Virginia (SOVA). Working in partnership with local and regional economic development groups, GoSOVA helps create and coordinate outreach programs that raise awareness of the region's talented workforce, pro-business environment and connected infrastructure via Southern Virginia's advanced open-access telecom network built and operated by MBC. About Mid-Atlantic Broadband Communities

Mid-Atlantic Broadband Communities (MBC) is a non-profit 501(c)(4) organization, committed to providing economic development leadership to southern Virginia. MBC promotes economic development in southern Virginia through the operation of a successful advanced open access fiber optic network, providing wholesale telecommunications transport services, colocation and tower leasing. Since its inception in 2004 and by offering a state-of-the art fiber optic network, MBC has supported the recruitment of major investments including data centers, call center/operations centers, advanced manufacturing, research and development, and bio-tech industries.
